### **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. <u>Claims 1, 7, 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over</u>

<u>Matsumoto et al (US 7,171,185) in view of Tomita (US 7,120,416)</u>

As to claims 1, 7, 8, Matsumoto teaches a method, comprising: filtering a signal with a highpass filter (see fig. 10, numbers 12a-12d, col. 7, lines 21-35); measuring image rejection and DC offset of the filtered signal (see fig. 10, number 16, col. 7, lines 21-35); and wherein the filtering, measuring and adjusting is repeated until a compromise between DC offset rejection and image rejection is achieved and wherein the compromise is reached when the DC offset rejection is within acceptable tolerances and image rejection meets minimum pre-specified requirements (see col. 8, lines 21-67, col. 9, lines 1-9). Matsumoto fails to teach wherein the filter is BPF and adjusting a center frequency of the band-pass filter. Tomita teaches wherein the filter is BPF (see fig. 1, number 14, col. 1, lines 35-49) and adjusting a center frequency of the band-pass filter (see col. 1, lines 51-60). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Tomita into the system of Matsumoto and Tomita in order to match the reference frequency of the mobile device and the base station.

10/813,270 Art Unit: 2618

2. Claims 2-4, 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumoto et al (US 7,171,185) in view of Tomita (US 7,120,416) in view of Vinn et al (US 6,441,682).

As to claims 2-4, 9-11, the combination of the combination of Matsumoto and Tomita fails to teach wherein the bandpass filter comprises two cross-coupled low pass filters; wherein the cross-coupling includes cross-coupled variable resistors and wherein the adjusting is done by varying the resistance of the cross-coupled variable resistors. Vinn teaches wherein the bandpass filter comprises two cross-coupled filters (see col. 5, lines 55-61); wherein the cross-coupling includes cross-coupled resistor and wherein the adjusting is done by varying the resistance of the cross-coupled resistor (see col. 7, lines 4-21). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the teaching of Vinn into the system of Matsumoto and Tomita in order to adjust the center frequency.

## Response to Arguments

3. Applicant's arguments with respect to claims 1-4, 7-11 have been considered but are most in view of the new ground(s) of rejection.

### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nhan T. Le whose telephone number is 571-272-7892. The examiner can normally be reached on 08:00-05:00 (Mon-Fri).

10/813,270 Art Unit: 2618

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Urban can be reached on 571-272-7899. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
